Greetings,

The Nature Conservancy and its partners have been engaged in scientific field investigations in the upper Nushagak-Mulchatna and Kvichak River drainages since 2008. The work included sampling water quality, aquatic ecology, and fish within the region. Sites were purposely collocated to characterize a more complete picture of the region.

I am sending this introductory email with a database user guide and overview map. I will send a second email with a link to the actual database (~800 Mb MS-Access file).

Please feel free to contact me if you have additional information.
